Abstract—This article considers the issues of developing strategic directions for the region's growth, which aim at achieving economic stability. The study has selected key industries and revealed industrial clusters of the Republic of Mari El as well as found industrial groups with significant growth indicators. In fact, these groups can set a base for cluster initiatives insuring economic stability of the region.

Keywords—region; strategy; cluster; economic stability.

I. INTRODUCTION

Sustainable, integrated and systematic development of the subjects of the Russian Federation and efficiency of its regions ensure national security of the country, including its economic aspect. Economic stability of a region is a potential and ability of its economy to gradually improve population's quality of life within generally accepted standards, to resist the influence of internal and external threats at optimum spend of all types of resources and sustainable use of natural factors, to provide socioeconomic and sociopolitical stability in the region [1].

It is relevant to align development strategies of the regional economy with the Strategy of spatial development of the Russian Federation—2025 in order to establish a regional policy of economic stability as a part of the general socio-economic policy providing independence of the economy and opportunities for sustained improvement of people's wellbeing.

The goal of this study is to develop theoretical and methodological approaches to formation of strategies of regional development for ensuring its economic stability.

II. METHODS

The research methods of this study include both systematic and integrated approaches applied to studying the region's capacity as a dynamically growing system and to shaping strategies of its development. The study uses empirical, theoretical, and quantitative methods, namely: abstract logical, historical, monographic methods, deduction, induction as well as a statistic and economic method, cluster analysis, and an expert method.

The issues of territorial organization of the regional socio-economic space, sustainable development and formation of the regional strategy through a cluster model

are considered in the works of such researchers as: O. Borisenko [2], M. Gritsay [3], A.V. Gutnik [4], O.P. Ivanova [5], O.A. Kozlova [6], B. Markova [7], R.M. Nizhegorodtsev [8], K. Rentkova [9], A.E. Strelyaeva [10], A.L.Gerritsen [11], W. Jianfeng [12], T. Kenderdine [13], J. Saunavaara [14]. Cluster evolution, relation of clusterization with innovations and its influence on outcomes of regional development, cluster efficiency factors are investigated by K. Kourtit, P. Nijkamp and S.Suzuki [15], C.A. Rincón Díaz and J. Albors Garrigós [16], R. Njos, S.-E. Jakobsen [17]. L.I.Abalkin, M.A. Bendikov, S.Yu. Glazyev., I.V. Ilyin, V.L. Ortynsky, V.L. Pozdeev, V.K. Senchagov, V.H. Tsukanov do research into economic stability. However, the regional aspect of a problem of shaping strategies ensuring economic stability of the region remains rather understudied.

This article presents the results of modeling strategic development of the region; the model is created by selecting key industries and revealing regional industrial clusters with their potential growth points, which can ensure the region's economic stability. The results of calculation constitute economic justification for the strategy of the regional development in the long-term perspective.

III. RESULTS AND DISCUSSION

The study has shown that the economy of Mari El has an agro-industrial orientation, with a processing industry prevailing. According to the sectoral classification of the industry and agriculture, Mari El is not a mono-specialized region [18].

Development of the regional policy of economic stability is based on clusterization of the industries and sectors of the regional economy. To reveal regional industrial clusters of Mari El we selected key industries using a location quotient and a regional input of an industry, or its regional shift (TABLE I).

TABLE I. SELECTION CRITERIA OF REGION'S KEY INDUSTRIES

Indicator	Condition for Inclusion in the Further
	Analysis
Location Quotient	LQ≥1 not less than 2 times over the analyzed period
Regional Shift (Shift Share analysis)	Annual RS>0 not less than 2 times over the analyzed period (5 years)

Nearly 70 types of activity that constitute specialization of the regional industrial sector show either a significant growth of quality or an increase in production volumes.

Within this study, based on commonality of products, technologies and value chains, we selected 13 production groups which are interpreted as potential clusters (TABLE II). A cluster structure comprises (i) a type of economic activity representing a cluster core and (ii) related manufactures of the processing industry that supply raw materials and components.

TABLE II. INDUSTRIAL CLUSTERS OF MARY EL AND THEIR ELEMENTS

Production	Group	Group Element
Group	Levela	(Type of Economic Activity)
Wood	1st tier	Wood sawing and planing; wood treatment
processing		Veneer-sawing industry, plywood industry,
and		board industry, panels industry
manufacture		Wooden building structures and joinery
of wooden		products
products		Wood packaging industry
		Production of other wooden and corkwood
		products, plaiting materials
	2nd tier	Manufacture of basic chemicals
		Manufacture of other nonmetal mineral
		products
		Manufacture of other finished metal goods
		Production of tools, locking hardwares and
		locksmith's products
		Production of machines
Furniture	1st tier	Furniture production
	2nd tier	Sawing and planing of wood
		Veneer, plywood, boards, panels
		manufacture
		Production of tools, locking hardwares and
		locksmith's products
		Manufacture of other finished metal goods
		Production of machines
Paper	1st tier	Pulp, ground wood pulp, paper and
1		paperboard production
		Paper and paperboard goods production
		Publishing
		Printing and its services delivery
	2nd tier	Sawing and planing of wood
		Manufacture of basic chemicals
		Manufacture of other finished metal goods
Building	1st tier	Extraction of other minerals
materials and		Sawing and planing of wood; wood
constructions		treatment
		Production of wooden building
		constructions and joinery
		Veneer, plywood, boards, panels
		production
		Manufacture of glass and glass products
		Manufacture of bricks and other building
		articles of burnt clay
		Manufacture of cement, lime and gypsum
		Manufacture of concrete, gypsum and
		cement products
		Sawing, working and dressing of decorative
		and building stone
		Production of other nonmetal mineral
		products
		Production of metal building constructions
	0.1.1	and goods
	2nd tier	Stone quarry mining
		Manufacture of other machinery and special
T., d.,	1 -4 4:	equipment
Industrial	1st tier	Manufacture of basic chemicals

4		M
and household		Manufacture of paints and varnishes Manufacture of soap, detergents, cleaners
chemistry		and polishing agents
chemistry		Production of plant protection chemicals
		Production of other chemicals
		Manufacture of rubber products
		Manufacture of plastic products
	2nd tier	Manufacture of mechanical equipment
		Manufacture of other equipment for general
		use
		Manufacture of other machinery and special
		equipment Manufacture of electric motors, generators
		and transformers
		Processing of non-metal waste and scrap
Pharmaceutic	1st tier	Pharmaceutical manufacturing
S	2nd tier	Manufacture of basic chemicals
		Manufacture of other chemicals
Food	1st tier	Production of meat and meat foods
		Processing and canning of fishery products
		and seafood
		Processing and canning of potatoes, fruits and vegetables
		Manufacture of vegetable and animal oils
		and fats
		Dairy production
		Production of flour and cereal products
		Production of other food products
		Beverage production
	2nd tier	Production of prepared feed for animals
		Manufacture of plastic goods
		Manufacture of other metal goods
Maahinami	1st tier	Manufacture of mechanical equipment
Machinery	1st tier	Manufacture of mechanical equipment Manufacture of other equipment for general
		use
		Manufacture of machinery and equipment
		for Agriculture and Forestry
		Production of machines
		Manufacture of other machinery and special
		equipment
		Manufacture of automobile bodies, trailers,
		semi-trailers and containers Manufacture of auto parts and accessories
		and its engines
		Building and repair of vessels
	2nd tier	Hammering, pressure molding, stamping
		and forming; manufacture of goods by using
		the powder metallurgy method
		Manufacture of other finished metal
		products
Instrument	1 at tion	Processing of metal waste and scrap
Instrument engineering,	1st tier	Manufacture of electronic components and accessories for radio, TV and communication
radio,		equipment
electrical and		Production of medical products and
electronic		orthopedic appliances
equipment		Manufacture of devices and tools to
		measure, control, test
		Manufacture of optical devices,
		photographic and film equipment Manufacture of office and IT-equipment
		Watch making and production of other
		horological instruments
	2nd tier	Manufacture of casting
		Manufacture of insulated wires and cables
Electrical	1st tier	Manufacture of electric motors, generators
and power		and transformers
equipment		Manufacture of electrical distributive and
		regulating equipment
		Manufacture of electric lamps and light
		equipment Manufacture of other electrical equipment
	•	Evianniacinie of other electrical edilipment

		Ta
	2nd tier	Ceramics industry, except used in
		construction
		Other first processing of iron and steel
		Manufacture of casting; hammering,
		pressure molding, stamping and forming;
		manufacture of goods using a powder
		metallurgy method
Processing of	1st tier	Other first processing of iron and steel
ferrous and		Manufacture of casting
non-ferrous		Metal processing and coating of metals;
metals		metal machining using principal engineering
		processes
		Hammering, pressure molding, stamping
		and forming; manufacture of goods using a
		powder metallurgy method; production of
		other finished metal goods
		Processing of metal waste and scrap
	2nd tier	Production of basic chemicals
		Manufacture of mechanical equipment
Household	1st tier	Manufacture of cutlery, tools, locking-
appliances		furniture hardwares
and products		Manufacture of household appliances n.e.c.
for home	2nd tier	Other primary processing of iron and steel
		Manufacture of casting; hammering,
		pressure molding, stamping and forming;
		manufacture of goods using a powder
		metallurgy method
Textiles and	1st tier	Production of finished textiles except
clothing		clothing
		Production of other textiles
		Production of textile fabric
		Production of knitted goods
		Production of clothes from textile materials
		and clothing accessories
		Fur dressing and dyeing; production of fur
		products
	2nd tier	Production of basic chemicals
		Production of other chemicals
	1	1 roduction of other elicilicats

a. The activity types of the third tier (service organizations that constitute an economic infrastructure) cannot be referred only to one group and cannot be quantified.

The cluster of wood processing and wooden products includes the biggest number of enterprises (370), which are mostly concentrated in the cities of Yoshkar-Ola and Volzhsk (62.5% of the total volume of the cluster's shipped products). The enterprises of furniture and paper clusters are also concentrated in these cities.

Enterprises of the building material and construction cluster are located in the cities of Yoshkar-Ola (43.7% of the total output), Volzhsk (39.5%) and also in the Medvedevo municipal district (15.9%). The main volume of aggregate output of the industrial and household chemicals, pharmaceutics clusters is manufactured in the capital city of Mari Fl

The largest cluster of Mari El by the volume of output is food production. It includes well-developed production of semi-finished meat, sausages and bread products, dairy products, butter, cheese, and confectionary. The largest output is provided by Yoshkar-Ola Meat-Processing Plant, Meat-Processing Plant Zvenigovsky, Republican Dairy Plant, Suvenir Firm, Sernursky Cheese Factory.

Machine building is the major direction of the specialization of the real sector of Mari El's economy, which employs about one third of the economically active population of the republic. The industry includes defense contractors (MMZ), enterprises producing electrotechnical and electronic equipment (ZPP, Nata-Info, Kopir Plant,

Chromatec), electric equipment and power equipment (Krasnogorsky Plant of Electric Motors, Tavrida Electric).

The cluster core of ferrous and non-ferrous metal processing consists of enterprises manufacturing powder metallurgy parts and iron castings: Kristall, Impuls, Volga Plant of Precision Casting, and Kupol Plant of Powder Products. Production of the cluster of the household appliances and products for home includes refrigerating and heating appliances, locks and hinges, and metal-cutting tools. The leading companies are located in the cities of Volzhsk (Ariada, SoftTerm) and Yoshkar-Ola (Inreko Production Association, Tiara). The cluster of textiles and clothing specializes in production of clothes, knitted, hosiery and fur products and includes such companies as Iskozh Plant, Marital Factory, and Maritex.

The dynamic analysis of enterprises' financial and economic indicators revealed a steady increase in production and product sales in such directions as instrument engineering, metallurgy, food, and wood processing. The stagnating sectors are machine building, pharmaceutics, production of household appliances and products for home, industrial and household chemicals, electric and power equipment, building materials and construction. Production of furniture, textiles and clothing is decreasing by a number of different criteria.

Visual representation of strategic positions of the processing sectors (Fig.) applies a matrix of "group size – group growth rate".

IV. CONCLUSION

The proposed model of regional strategic development is based on establishing regional industrial clusters. The selected clusters have their individual structures determined by historic, geographic and institutional conditions. For example, proximity to the natural resources and adequate sales markets allow such production groups as Food and Construction Materials to concentrate their manufactures in all the municipal districts of Mari El. Alternatively, the largest cities,

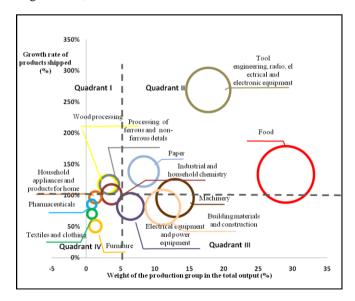

Fig. 1. Strategic positioning of the manufacturing cluster cores

Yoshkar-Ola and Volzhsk, historically became centers of development of machine engineering, paper, metallurgical and textile industries and woodworking.

The dynamical analysis of financial and economic indicators of enterprises forming a cluster allowed us to conclude that the clusters include production groups with significant growth indicators and actually representing a base for development of the cluster initiatives ensuring economic stability of the region.
